

Product Overview

The Wireless Pump Module connects AKW SmartCare Plus® and SmartCare® Lever electric showers to the AKW M11, M17 and M20 DigiPumps® by receiving information from the shower and transmitting it to the pump.

The wireless module comes with a PCB that is plugged into the heater unit, wirelessly connecting the shower to the pump. Our range of DigiPumps® enable waste drainage where gravity drainage isn't achievable, with the wireless module removing the need to feed wires behind existing tiling or wall panels.

Features

- + External wireless communication device compatible with AKW SmartCare Plus® and SmartCare® Lever electric showers
- + Compatible with all AKW DigiPumps®: M11, M17, M20
- + Supplied with matched PCB to connect wireless module to the shower unit
- + Once the wireless module is paired with the shower it will remain connected even if both the shower and pump are isolated from the mains supply
- + The module continually checks the link between the pump and the shower

Benefits

- + Wireless module means no cables are required to connect the pump and shower, providing a quick and easy installation solution when a pump is required to draw water from shower waste as gravity not achievable
- + Pumps are available with different capacities to support the volume of water flow; all are compatible with the wireless module
- + Fit and forget set up, no need to re-pair shower and pump if power is disrupted
- + If a disconnection occurs between shower and pump, the shower will automatically stop the water flow and the shower on/off ring indicator combined with other indicators (if applicable) will flash

Product Specification

- + Can only be purchased with compatible showers as part of a kit from July 2021
